Vivien Billot

Senior Software Engineer — C#/.NET, Quant, Cloud & applied AI

Paris region, France • +33 6 23 85 77 32 • billot.vivien@gmail.com • LinkedIn • GitHub • Portfolio / code

POSITIONING

I operate where business, engineering, and production meet: proprietary sports pricing, information-system modernisation, Cloud platforms, technical debt, and team performance. My value is to make the domain explicit in code, secure critical decisions, and turn complexity into controlled delivery.

CLEAR DOMAIN | TESTED CODE | OBSERVED PRODUCTION | DURABLE ROI

14+ years
of continuous progression up to Tech Lead roles

Quant
proprietary probabilities, Monte Carlo and controlled odds

11 + 4
TF1 projects in production or underway in a critical system

500+
branches supported through digital transformation

TARGETED SKILLS

Back end — C#, .NET, .NET Core, ASP.NET Core, REST APIs, business services

Architecture — DDD, hexagonal architecture, CQRS, Clean Architecture, SOLID, microservices

Quality, security & production — TDD, NUnit, XUnit, Vitest, SonarQube, Checkmarx, Snyk, Datadog, ELK

Front end & data — Angular, TypeScript, SQL Server, PostgreSQL, Oracle, MongoDB

Cloud & delivery — Azure, AWS, AKS, Docker, Helm, Dagger, GitHub Actions, Azure DevOps, TeamCity

Leadership & engineering AI — roadmaps, coaching, hiring, Accelerate, Claude Code, Cursor, agents, routines, and workflows

PROFESSIONAL EXPERIENCE

Betclic Group

Since Oct 2025

Senior Software Engineer — Quant & sports pricing

Contributing to a proprietary pricing chain: generating internal probabilities, reducing dependency on providers, and offering bettors controlled odds faster.

- Model match outcomes through algorithms and Monte Carlo simulations across numerous sports and competitions to estimate probabilities.
- Turn probabilities into internally controlled odds to improve reaction speed, risk control, and autonomy from external providers.
- Design sensitive market-lifecycle rules, including decisions to suspend and reopen markets.
- Build a replay, tracing, and analysis back office to reproduce matches, understand discrepancies, explain algorithmic decisions, and validate fixes safely.
- Assess compute acceleration through a GPU proof of concept; industrialise AWS delivery with Dagger/GitHub Actions and structure controlled Claude Code/Cursor AI routines.

Environment: C#/.NET, Quant, Monte Carlo, GPU, AWS, Dagger, GitHub Actions, Claude Code, Cursor

TF1 Group

Feb 2022 — Oct 2025

Tech Lead / Software Architect — advertising-system redesign

- Act as technical reference for three multidisciplinary teams, covering architecture, roadmaps, prioritisation, coaching, hiring, risk framing, and delivery commitments.
- Bring 11 projects to production, support 4 additional projects underway, and manage over 80 production incidents.
- Modernise VB6 legacy towards .NET 6/8, Angular, Azure, and AKS while structuring API governance and application security.
- Reduce lead time through Accelerate practices, testing, and observability; lead AI explorations, beta tests, and automations around business processes.

Environment: .NET 6/8, Angular, Azure, AKS, Docker, APIGEE, Datadog, Checkmarx, Snyk, SonarQube

IMMEDIATE VALUE

Secure the business
Make critical rules, invariants, and sensitive decisions explicit and testable.

Modernise safely
Reduce debt step by step, with tests, observability, and a realistic trajectory.

Increase team leverage
Align architecture, delivery, field feedback, and team autonomy.

PROFESSIONAL EXPERIENCE — CONTINUED

Rent A Car

Dec 2017 — Dec 2021

Senior Developer → Tech Lead / Technical Manager

- Progress to technical manager of a nine-person team and support the digital transformation of a network of over 500 branches.
- Launch Easy Péage, presented as Europe's first in-vehicle toll-payment service for rental cars.
- Digitise the customer journey through check-in, Yousign e-signature, WeProov inspections, and high-traffic e-commerce redesign.
- Build microservices, dynamic pricing, an ANTAI interface, and a GDPR-compliant customer master; industrialise CI/CD, Docker, AWS, and ELK.

Environment: C#, .NET Core, Angular, PostgreSQL, microservices, AWS, Docker, ELK

Stago

Dec 2012 — Nov 2017

R&D Study Lead → R&D Team Lead

- Design the C# patient-results calculation framework for a new range of in-vitro diagnostic instruments in a regulated medical environment.
- Refactor critical modules with TDD, SOLID, and MVVM; structure TeamCity continuous integration and requirements traceability through IBM Rational DOORS.
- Lead an eight-person R&D team across planning, hiring, training, performance indicators, and supplier management.

Environment: C#, WPF, PostgreSQL, NUnit, TeamCity, IBM Rational DOORS

EARLY EXPERIENCE

Bentley Systems · Junior Software Engineer

Apr — Nov 2012

Completed a civil-engineering business framework; built a parametric-expression editor and tools to validate and repair data integrity.

C++, C#, .NET, UML, Scrum

Total · VB.NET Developer Intern

Feb — Jul 2011

Built hydrocarbon-transport audit tools for Africa and the Middle East: centralised data, automated dashboards, fewer reporting errors, and improved traceability.

VB.NET, Access, SQL, Excel

PUBLIC EVIDENCE & DIFFERENTIATION

- **Product portfolio & digital twin:** Angular 22 SSR, hexagonal architecture, TDD, Vitest, Playwright, AXE/WCAG checks, profile-grounded chatbot, and secured GCP deployment.
- **LinkedIn recommendations:** public attributed testimonials that support reliability, knowledge sharing, technical posture, and leadership.
- **CodinGame:** Grand Master, global top 0.1% — optimisation, algorithms, and problem-solving under constraints.
- **Public TDD labs:** TicTacToe Solver, BullsAndCows, and Vending Machine — business rules, refactoring, and test-guided design.

EDUCATION & CERTIFICATIONS

ESILV engineering degree, Scientific Computing specialisation (2007–2012) · Exchange programme at Université Laval, Québec.

Training and certifications: Domain-Driven Design — Julien Topçu · Advanced C# — Valtech · Design Patterns — Learning Tree · Management — EFE · SAFe Release Train Engineer 6.0 · Application Security · Azure & DevOps · Datadog & Observability · Technical Recruitment — Mobiskill.

Languages: French — native · English — professional proficiency.
